DESCRIPTORS: \*Psychology, \*Attitudes, Measurement, Statistical analysis, Probability, Matrix algebra.

Lazarsfeld's latent structure analysis is used on the latent class model with dichotomized questions. This mathematical model is based on the following postulate: Within a homogeneous latent class the answers to the different questions are independent and the frequency of positive answers to each question is close to the latent probability. The statistical procedure involved calls for matrix analysis and the general mechanism. (Behavioral Sciences--Psychology, TT, v. 7, no. 10)(over)
